

The image features a background of a dense, golden-brown brush texture. Overlaid on this are several dark, angular geometric shapes. The text 'BrushX' is positioned in the lower right area, with 'Brush' in orange and 'X' in white.

BrushX

BrushX is the tail skin brush as designed and manufactured by **AB TUNNELLING** to meet the specific request of the **customer**.

The brush is tailored in its parts and guarantees the best sealing during backfilling phase.

The results are easily visible in particular in the increase of TBM productivity and in the lower maintenance.

AB TUNNELLING has designed and produced **BrushX**.

Tail skin brushes guarantee a perfect distribution of backfilling mixture.

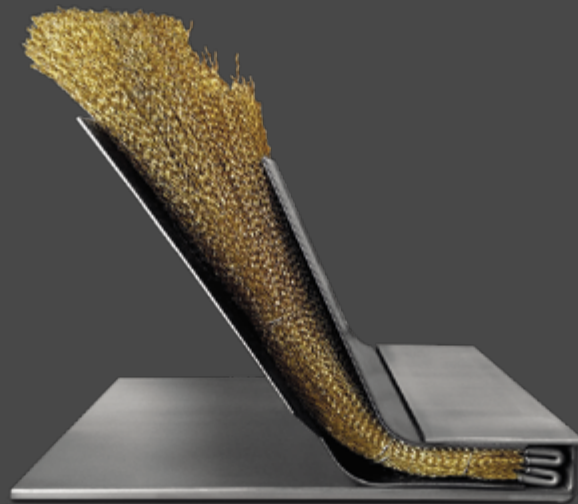

Description

- High wear resistant steel to minimize maintenance and replacement
- Excellent capability to retain tail skin grease and to confine backfilling mixture
- Customized design to suit specific project requirements

Technical characteristics

- Crimped wire with high tensile strength > 2000 MPa
- Harmonic steel sheet with high carbon content
- Innovative fixing system for crimped wire bundle
- Addition of sheet in polymeric material upon request
- Steel partition mesh

Made in Italy
